

Plants and human being rebuilt with
essence of blood being freeze for zen and
neuron have own creature one selves
植物繊維とミネオ輪根による電気信号、
瞑想法との関係、ドーパミンによる作用の
停滞から生成される効果
Gaba の消去による思考の停滞作用との関係

Masaaki Yamaguchi

GutZen Experience of system that plants have required of blow in blood of water with minneo cell, this system entrante for essence of live energy. This mechanism belong to freeze with human being for mind and heart construct for slowest of narrow blood with electric high tension with this plants of system. All of essence with zen of system by plants of mechanism use for freeze of human being and mind of heart for being not listened from noise of our areas. Plants neuron belong with energy and electric dusts given into human own neuron, so this system also use of inverse being freeze in stop with mind and relax for blood of pressure after out of noise with mind, then this freeze of mind emerge with accesserity of infinite zen in plants of essence being deceived with. After all, this element is Gaba. Dopamin also belong of construct with this system. All of this essence are inner of human blood pulse.

Cell of scopist level that constructed with high air press into low air press of micro scope blood pulse, and this stream flow between high level and low level of pulse in cell press, out of cell in sodium for potassium of ion channel facilitate with this system of blood press mechanism.

細胞レベルでは、高気圧と低気圧との関係を形作っている、イオンチャネルでもあるナトリウム・カリウムチャネルが血圧の高低差を形成している。このシステムをエチゾラムとプロチゾラムが、アムロジピンとカンデサルタンと同じく血圧の安定としての、電子レベルと細胞レベルの機構を瞑想の原理として、血圧の安定としての、血流の停滞を分子レベルとマクロレベルとして、リスパダールの精神を落ち着かして、この作用と同じく瞑想法と速読法をしやすくしている。
